

KhataAI Documentation

Section 1: Project Overview

1. Introduction

KhataAI is an AI-powered, voice-first business management platform designed for small and medium businesses. It combines bookkeeping, inventory, customer management, AI assistance, OCR, analytics, and automation into a single application.

2. Problem Statement

Many businesses rely on paper records or multiple disconnected applications. This increases manual work, causes errors, and makes business insights difficult. KhataAI aims to simplify daily operations using AI and voice interaction.

3. Objectives

Provide a unified platform for customer management, inventory, billing, expenses, analytics, AI-powered insights, voice commands, OCR-based document processing, and business automation.

4. Key Features

• Voice-first interaction • AI Chat Assistant • Customer & Supplier Management • Product & Inventory Management • Sales & Expense Tracking • OCR Invoice Processing • Analytics Dashboard • Notifications & Reminders • Multi-language Support • Secure Authentication using OTP.

5. Core Modules

Module	Purpose
Authentication	OTP login and secure access
Customers	Manage customer information
Products	Maintain product catalog
Inventory	Track stock movement
Transactions	Invoices and payments
Expenses	Business expense tracking
AI	Business insights and chat
Voice	Speech-to-text commands
OCR	Invoice/document extraction
Analytics	Reports and dashboards

6. Target Users

Retail shops, wholesalers, distributors, freelancers, service providers, and small businesses seeking an affordable AI-powered management system.

7. Technology Vision

Build with FastAPI, MongoDB, Redis, Celery, Docker, and modern AI models while remaining cloud-independent and easy to migrate to managed cloud services later.

8. Expected Benefits

Reduced manual work, improved accuracy, faster business decisions, AI-driven insights, scalable architecture, and an intuitive voice-first user experience.

9. Conclusion

KhataAI is envisioned as a modern AI business operating system that grows from a simple bookkeeping solution into an intelligent platform for managing business operations.
